CHUKWUDI JUSTIN

AI Automation Engineer | n8n, Make and AI Integrations

Lethbridge, AB | jchuks2020@gmail.com | linkedin.com/in/chukwudi-justin | github.com/CodingIsForMe | chukwudi-justin-portfolio.vercel.app

SUMMARY

AI automation engineer and MSc Computer Science student at the University of Lethbridge. Over a year building production automations for clients in n8n and Make, wired into Google Sheets, Airtable, REST APIs and LLMs (OpenAI, Claude). Make Level 5 (Expert) certified, with a software development and data analysis background. Builds AI agents that take real actions through MCP servers, voice agents, and full-stack apps, and documents every build so others can maintain it.

TECHNICAL SKILLS

Automation and AI: n8n, Make (Level 5 Expert), OpenAI API, Claude API, Retell AI, MCP servers, Apify, Tavily, prompt design
APIs and Integrations: REST APIs, webhooks, JSON, authentication and credential management, error handling and retries
Development: JavaScript, TypeScript, Python, Node.js, Express, React Native, SQL, Git and GitHub, Claude Code
Data and Hosting: MongoDB, Supabase, Airtable, Google Sheets, Power BI, Vercel, Render

EXPERIENCE

AI Automation Specialist, 4Spot Consulting — Remote | Nov 2025 to Aug 2026

- Designed and shipped end-to-end client automations in Make and n8n, connecting forms, content systems, file storage, messaging and AI models so data moves between tools with no manual handoff.
- Built a production content-to-video pipeline across three Make scenarios: each new WordPress article goes to the Claude API for a script, HeyGen renders the video, and webhooks route the finished file to Dropbox for distribution to YouTube Shorts and LinkedIn.
- Deployed MCP servers (Teamwork, Unipile, Cloudflare) inside Make so AI agents can take real actions in those tools, reading and updating records instead of only returning text.
- Troubleshot live scenarios end to end: traced failed executions, read API and webhook payloads, fixed mapping and filter logic, and added error handling so failures surface instead of passing bad data downstream.
- Led a secure migration of production scenarios across environments, re-mapping credentials, moving hardcoded API keys into secure storage and securing webhook endpoints so no client data was exposed.

AI Automation Intern, Sourcing Sprint — Remote | Sep 2025 to Oct 2025

- Built production automations in n8n and Make for proposal generation, lead generation and outreach, invoice processing, content publishing and daily stand-ups.
- Automated invoice capture from emails and PDFs into Google Sheets (Make, OpenAI, PDF.co), and integrated OpenAI, Apify and Telegram bots through REST APIs and webhooks.

Volunteer Software Developer, Dalhousie University, Faculty of Computer Science — Halifax, NS | Feb 2026 to Aug 2026

- Sole developer of PosiFit, an offline-first React Native (Expo) health app with a Node.js, Express and MongoDB Atlas backend I designed and deployed on Render.
- Built cloud sync that restores a user's journal on a new phone with nothing lost or duplicated, using anonymous sign-in so no personal information is collected.

Software Engineering Intern, Descasio — Lagos, Nigeria | Oct 2024 to Dec 2025

- Built front-end features and client workflows to each client's stated requirements, checked against structured test plans with every defect logged and confirmed fixed.

Data Analyst Intern, PwC Nigeria — Lagos, Nigeria | Mar 2023 to Aug 2023

- Built Power BI, Excel and Google Sheets dashboards, and wrote SQL and Python scripts to clean and analyze data.
- Helped run training sessions teaching staff with no technical background to use Excel and Power BI.

SELECTED PROJECT

AI Voice Agent for Job Intake and Scheduling | Retell AI, Make, Google Calendar API — Loom walkthrough on portfolio

- Voice agent that answers calls, classifies the job type and collects the service address, then calls a Make scenario by webhook that reads a shared Google Calendar and returns real open slots for the caller to book.

EDUCATION AND CERTIFICATION

Master of Science, Computer Science, University of Lethbridge, Lethbridge, AB — Sep 2026 to Present

Bachelor of Science, Computer Science, Covenant University, Nigeria | First Class Honours — Sep 2020 to Aug 2024

Make Certification, Level 5 (Expert)

COMMUNITY

Co-Founder and Power BI Lead, Everything Data (2023 to Present): built and lead a 50+ member data community across LinkedIn and Slack.
